

MD 7000 STRATOS

Aluminium Grid Entrance Matting

- **Robust aluminium grid construction**
- **Sound absorbing, non reflective**
- **Finishes for all applications**
- **Elegant seamless panels**
- **Matwell or surface fitting**

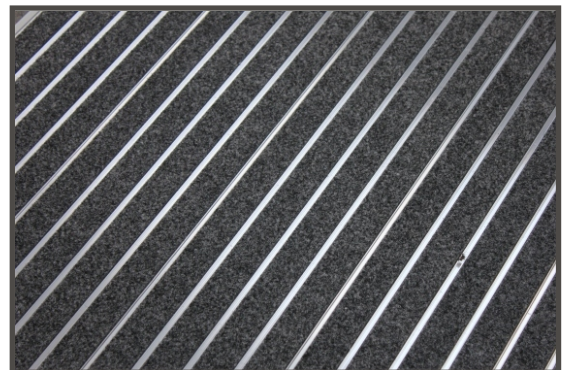

STRATOS is out front at many leading High Street facilities. Its clean lines and elegant appearance make it an easy choice for any commercial installation. STRATOS provides a compelling alternative wherever aluminium grid matting is preferred.

A closed construction design, STRATOS avoids the need to constantly lift the matting for cleaning, dealing with windblown and footborne grit with an efficient Deep Channel Grid to entrap the soilage, from where it can be simply removed by vacuum cleaning.

The system comprises a range of popular inserts to cover all aspects of internal and outdoor matting requirements.

STRATOS is manufactured in single width panels of up to 4 metres in length for a seamless appearance and can be supplied to suit any depth of recess frame. STRATOS is a suitable and ideal alternative for any matting specification.

Frames: Available in aluminium, brass or stainless steel. Straight lengths or notched profiles for site adjustment to curves. Choice of ramp and threshold profile for surface fitment are also available.

Infill Colours include: Black, anthracite, grey, blue, green, olive, brown, beige, natural, burgundy, red, tan.
