

Multi-layered clean film full adhesive layers form mats that effectively captures dirt and dust from foot traffic and wheels before entering a dust controlled environment.

Each numbered layer peels off to reveal a new clean surface. Full adhesive backing, prevents microbial growth and contamination.

Tacky mats remove 99% of particulate and should be situated outside the critically controlled area to prevent particles on the soles of shoes wheels or any moving object from being transferred.

The bottom layer sticks to the floor, 30 layers are peeled off as required.
