

Suredrain ring connectable Rubber floor tiles are hard wearing flexible tiles with both large and small holes to combine to allow soil, debris and moisture to fall through as well as offering excellent anti fatigue properties.

Coloured insert brushes are available to create signs or to increase the cleaning action.

With specifically designed rubber connectors, large floor areas can be laid easily and quickly without special skills.

This is a truly multi purpose Rubber flooring tile product and can be used for roof access areas or in kitchens on construction sites, ski centres, garden centres, greenhouses, recreation areas or anywhere to combat heavy foot borne soilage, moisture or snow.

Suredrain ring Rubber tiles are also used for ground stabilisation allowing grass to grow and solidifying muddy areas.

Thickness (mm): 16, 23
Weight/M2 (Kg- Approx): 2.8, 5.9
Tile size (1.5m x 1.0m): EX STOCK

Colours: Black
Hardness: 60Shore A
